[START] I. History AutoCAD was originally developed in the late 1970s at the Lawrence Livermore Laboratory (LLL) in California. LLL is a Department of Energy (DOE) national laboratory that operated under the Atomic Energy Commission until 1992. When it was run by the Atomic Energy Commission, LLL operated under the code name Project 929. The developers of AutoCAD were John Maloney and William Plante. AutoCAD was first released for the Apple II computer system in 1982. It took the form of an interpreted macro language based on ASCII text. It was called named AutoLISP and was very similar to Applesoft BASIC and Auto-BASIC, which were also on the Apple II system. AutoCAD remained an Apple II product until the 1985 release of the Macintosh. The Mac, however, made the Apple II platform somewhat obsolete. After the release of the Mac, LLL decided to release AutoCAD for the Macintosh computer system. The release of AutoCAD for the Macintosh was a major shift in the development and marketing of AutoCAD. AutoCAD was originally designed to run on microcomputers. When first released, MicroCAD was a separate program from AutoCAD. MicroCAD ran on the original Apple Macintosh and Apple II systems. It was never available for the Apple III, the Lisa or any other Apple computer system. Later versions of AutoCAD for the Macintosh were released that replaced MicroCAD with AutoCAD and used a single code base for both AutoCAD and MicroCAD. II. Autodesk was founded in 1982 by John Maloney, William Plante, John Roth and Rod Holt. Rod Holt came to Autodesk as a technical consultant and began to build software, including AutoCAD, for the Apple II system. He created the first version of AutoCAD for the Macintosh as well as the BASIC programming language that was the basis of the AutoLISP programming language used in the first version of AutoCAD for the Apple II.
