Show HN: Curl One Sentence at a Time - mohsen ===== photonios I think the web page could do with a _somewhat_ more substantial introduction. Maybe something like this: "curl is a command line tool for transferring data from or to a web server. It uses GET, POST, PUT, and DELETE to transfer data from your computer to or from a web server. It can also be used to download and display web pages. curl allows you to do things like: curl curl curl -d "key=value" Use curl to download a page, use curl to post data to a web service, and so on." ~~~ mohsen Thanks for the feedback. I've updated the intro. ~~~ photonios It's a bit of an abrupt transition between the intro and the description of the various features. India has been going through a rough patch recently and that has taken its toll on the stock market, with the Sensex falling by nearly 3,000 points in the last month. According to research firm, Sharekhan, the market is facing a downswing after getting over its euphoria after the Budget. In its weekly newsletter, Sharekhan said that the mood in the market is low. "Market has also started reacting to weak macro trends that are flowing in. If we are able to bring back initial enthusiasm and emotion, then the market will turn around. But if things get worse, the market will likely fall further," the newsletter said. Sudipto Mundle, co-founder of Sharekhan, told CNBC-TV18 that with the market facing a downturn, it was time to be cautious about the gains achieved in the recent past. "If we look back, the gains were mainly driven by cheap

Sunday, May 12, 2012 A solid-state lithium-ion battery is an innovative technology that is actually being developed for years. The benefits include compactness, lightness and the ability to store power, without the use of toxic materials such as lead, mercury and cadmium. A couple of years ago, there was a mini revolution because of a company called Edify. This company produces a successful solar cell and packaged it in a unique way. Although the initial production did not go so well, it could be understood that if something can be packaged in a solution-depositing material, then the device that is made from that material can be assembled in a way that is suitable for many applications. Later, Edify started to be used in the cell phones and then there was a small revolution. But, if cell phones are of any interest, then the consumer needs a battery and batteries can be made using the technology in solar cells. The German renewable energy research centre is working on developing batteries that will be applied in the consumer market. It has a goal of providing consumers with a battery that is equivalent to nickel metal hydride in efficiency. The battery is composed of a solid-state lithium-ion cell in a polymer material that has fewer restrictions compared to the metal-hydride battery. The product that will be produced is a very good version of batteries of the future and will come into the market at a reasonable price, but the company has yet to prove that it will actually be successful. The director of this project is a battery expert and he stated that solid-state lithium-ion batteries can be a good solution for most applications and that is why this technology is being used for these devices. The solid-state lithium-ion battery uses a polymer material that stores the lithium ions inside it. This polymer material is an inorganic polymer with a metal oxide. We all know
