In order to get the wifi driver you can follow the guide provided by Belkin. First you need to download the Belkin.NET software and then open the ZIP file you received from Belkin. There you will find the file you need which you can double click to install. If you choose to install the driver manually, then you will also need to download the appropriate driver files. The drivers are packed in the Belkin.NET software package, therefore before you install them, you have to verify if they are compatible with the Belkin router. To install the software, you will need the router serial number which you can find inside your router manual. You can also use the software to check if the hardware and drivers are compatible. It does not function properly or does not work at all. The drivers will let you know if the device needs a new driver or not. Restart the computer after your installation is complete. This file is needed for the wifi adapter to perform as it should. The wifi chip is type of bga1535. All the drivers are listed in order of company and these companies might be Wirbit, ASUSTeK, Dell, Network Cards, Atheros. Many people today enjoy using their laptops, PCs, and other portable devices and gadgets to access the internet. Wi-Fi is the small wireless electronic devices that are available to consumers. Wi-Fi is a type of networking that links computers to the internet. It is also one of the most widely used types of network with a router. However, this is not all. You can buy Wi-Fi adapters to plug into your laptop or portable device to use as a new router. WI-Fi is very popular because it works easily as well as cheap. WI-Fi provides the perfect opportunity for you to have access to the internet when you are on the road, and you can connect from any place. The first Wi-Fi Connection The first idea of the internet was in the late 1940s. In this year, the first type of network was developed. It was called point to point protocol or PPTP. However, this system was only applicable to small networks. The first known Wi-Fi network was developed in 1990. The network had a different name, which is the name of the manufacturer. This time, however, it also had an internal name called "Infrared Data Association." The first ever Wi-Fi device was sold in 1991. The device was called the AC1200 wireless mouse. Wi-Fi in a computer The first major company to use Wi-Fi was the Hewlett Packard Company in the year 2001. This company also created the wireless standards 802.11a and 802.11b. The first Internet and Wi-Fi connection was on a laptop. It was called an "Internet connection over Bluetooth." The last connection between the two devices was on a portable device. It was a Wi-Fi connection on a Motorola MP3 player. The Wi-Fi connection has now been upgraded to include newer standards such as 802.11a and 802.
