Reviewsits comfortably in between the ideas of strategy and RPG, has some of the best gameplay I've played in a while, and has surprisingly hilarious and engaging voice acting. It's my favorite game of the year.Solid GamesAll in all, one of the best Tower Defense games you'll play in a while.Architraal This is a great game that demands from the player to be smart and wily, while enjoying the platformer gameplay of their favorite games like Super Meat Boy and Super Meat Boy And The Bacon Award.Team Meat after this game, it's a hard job to get an Indie game to be released, and let alone it being a Puzzle game... Quite an achievement.Every single thing in this game is beautiful, this is as classy as a game can get. The game got awesome music, with amazing and

catchy chiptunes, and the user interface is simple and smooth. Nightmare Before Christmas is a very good game with a beautiful art style and soundtrack, it's pure genius from the developers, and is probably one of the few games that can use the Shadowrun theme perfectly. Waking up and having the music from a Silent Hill game get on the song list and making a puzzle game with the theme of a Silent Hill game... well, this is just a perfect game. The point being... A+ all the way! It's a very interesting mechanic, where a boy grows up under the shadow of the evil villagers until a day comes that he will fight with them in order to protect the village from their evil. With the music from a Handmaid's Tale episode, the gameplay is similar to the Blender Game Engine and seems to have been made for it, if you're into the LBP's style of gameplay. CDynama7 At the moment I'm trying to keep my job with the help of my friends and enemies. But I'm also buying things with my friends and throwing away things to enemies. Reviews! It's a game about collecting orbs and deploying satellites, while trying to avoid blowing yourself up along the way. Yes, it's a game that has very simple mechanics and graphics, but it still has enough depth for a game of this nature. 8 Angry Robot The next few steps in making my own game were compiling sprite sheets and level editors. I made sprite sheets for 10 characters (Bruin with mask on, Bruin without mask, Owlbear, and the Phantom) and edited the level editor to where I could edit characters and camera for each level.

**1. Field of the Invention** The invention relates generally to a sensor for an information handling system, and more particularly, to a sensor for determining whether an information handling system is operating in a hibernate mode.

**2. Description of the Related Art** In general, a server system typically includes a processor, a non-volatile random access memory (NVRAM), a non-volatile storage device (such as a hard disk drive (HDD)), a switch, and a power supply (such as a line driver (LD) adapter or a power supply module (PSM)). The processor executes a variety of server applications to execute and perform server operations, such as e-mail service, file sharing, database management, etc. The NVRAM stores processor context, memory load status, and power on/off status for the server. The HDD stores user data (e.g., transaction records, user data). The switch couples the HDD to the processor and the NVRAM, and the PSM supplies a DC voltage to a server motherboard. The LD couples the switch to the server motherboard and converts the DC voltage into an alternating current (AC) voltage to supply power to the server motherboard. The server motherboard includes a variety of circuits disposed thereon. Typically, a sensor is disposed on the server motherboard to detect a power status of the server. However, if the sensor is disposed on the server motherboard, a transmission length of a current path of the sensor is increased. As a result, the sensor is prone to operate at an inappropriate voltage and thus loses stable operating characteristics. In order to overcome the foregoing problem, a sensor for a server motherboard is disclosed. Therefore, a need has arisen for a sensor for a server motherboard, which is disposed outside the server motherboard, can stably detect a status of power, and efficiently transmits signals to the server motherboard.

Accordingly, the invention provides a sensor for a server motherboard, which
