Langerhans' cell histiocytosis is a systemic disease characterized by the formation of multinucleated giant cells that involve primarily the dermis, but also may involve the lungs, liver, and other organs.

Cutaneous lesions usually develop in the head and neck regions. The disease is considered to be part of the spectrum of diseases that comprise the group of malignant lymphomas of the Langerhans' cell histiocytosis.CAMPBELL, Calif. (VVNG.com) — A father of four is behind bars after police say he started a deadly wildfire that destroyed homes in four communities in northern California. The San Jose Mercury News reports that Scott Michael Greene was arrested Thursday in the deaths of seven people and the serious injuries of three others in the firestorm that consumed the communities of Wrightwood, Idyllwild and Santa Rosa. Police say Greene started the

fire on May 29 with a cigarette lighter. Authorities said the blaze jumped four roads and 300 to 500 feet (91 to 148 meters) through the area, destroying more than 100 structures and causing an estimated $200 million in damages. Greene fled and was on the lam for five days before he was captured. Greene was the only person in the area when he started the fire. Neighbors helped the man's estranged wife, who had a restraining order against him, flee the area with her son. The son called a sheriff's deputy who found the family at a house on Firestorm Way in Wrightwood. Authorities found the home and belongings destroyed. The couple's daughter and another son remained in the area and helped to

evacuate about 50 people. ca3bfb1094
