Players can experience a level of fidelity with movement and reactive animations that was previously not possible. And as players enjoy the new simulations, they'll naturally start to naturally show more player-specific characteristics like thigh rolls, cuts and accelerations that capture the natural movement and agility of the players." We are sorry to say that the Expected Simulations story mode will NOT be included in this edition of the game. Much rather than celebrate EA's efforts on this title, which looks to me like a large step forward for a series that has long had its way with sports and looked more like a wannabe-Sid Sackson than a proper a player, it has to be said the community looks more than a little apprehensive about the lack of an era-bridging story mode, and I am not surprised. It was effectively always going to be difficult to get this day's story right when taking into account all the new content needed, and the other things going on in the calendar, but this must have been a near-impossible task anyway. I do understand why they are stating that this will be included in FIFA 20, but it doesn't mean that the later iterations won't be done properly of course, but I think they will just have to get the changes made in the first place.
