## PSPGamedemoPapanolukotooKikinasaiJPNISODownload |WORK|rar

Read this PSPGamedemoPapanolukotooKikinasaiJPNISODownloadrar offline Read all what you read here: pspgamedemoPapanolukotooKikinasaiJPNISODownloadrar-all.txt Thanks..! A: Answer as @thirtydot mentioned i use the @ECHO OFF and then YES / no / TRUE / FALSE / OFF / ON / YES / NO / VALUE See here: How to use Thanks to @thirtydot Q: Asp.net mvc: how to get data from controller in javascript (jquery) I am trying to get object values from a controller to the javascript as follows: var value = "@Model.Name" var path = '@Url.Action("ModifyAction")' \$.ajax({ type: "GET", url: path, data: value }); But i get the error: @Controller.ModifyAction() is not a valid method. How can i fix that error? Does anyone know what is the best method to transfer data from controller to javascript? A: You need to pass ViewBag in order to pass the data to view [HttpGet] public ActionResult Index() { ViewBag.Message = "This is a test"; return View(); } public ActionResult OtherMethod() { ViewBag.Message = "This is another test"; return View(); } Your page (example.cshtml) @Scripts.Render("~/bundles/jquery") @Scripts.Render("~/bundles/jqueryui") @Scripts.Render("~/bundles/jqueryval") @Scripts.Render("~/bundles/knockout")
