

Tenstar Digger Simulator Full |VERIFIED|

The Tenstar Digger Simulator, Multi-Machine Environment (MME) and VR headsets, offer a multi-station management system (MSMS). Tenstar offer a large variety of machines all with professional components and HMI control systems. The models range from 600 to 2,500 kW. More than 90 manufacturers are providing complete machine solutions to Tenstar, many of them for the first time. Tenstar provide a large variety of machines in various sectors. The model range of course primarily includes industrial machines such as articulated dump trucks, compact track excavators, articulated and telescopic excavators, wheel loaders and dozers, as well as agricultural and turf machines. In addition, we offer the basic rotary excavators and loader models. An integrated simulator concept for these machines is making its way onto the site. Since 2013, Tenstar have been working on the development of a simulator which will provide a realistic training environment. The experienced professionals at Tenstar Simulators have developed the VR training concept to maximize training efficiency. Trainees can train at different simulator sites and use the equipment and sensors of the real machines in a VR application. Trainees can start the exercise from any position using manual control and automated training. The entire process is recorded using a camera system. All possible problems are detected and tracked using several sensors. Then the operator can view the situation and take the appropriate action in the training and monitoring software. The VR process offers the potential to develop better training methods than are currently known from on-site training and training in a real construction site.

Tenstar Digger Simulator Full

The Tenstar Simulator is specifically designed to provide a trainingsolution for the education of crane operators and is now also available with VR headset. Our product is specifically designed to offer students a realistic environment with self-instructive exercises that reflect real-life machine behaviour and operations. The VR headset provides a training solution that combines immersion (presence) technology, interaction with the environment and effective tools for learning. Tenstar simulators use interactive pedagogical methodologies, where the user can experience three dimensional environment where he or she can walk, explore and interact like in the real world. This enables the user to use the simulator to put into practice the training learned in the virtual world. Tenstar Simulator training centers can provide all-round training in one location. This tool teaches students how to recognize and correct a fault, identify crucial machine parameters, what to do when encountering an emergency situation and how to stop a machine efficiently. A Tenstar Digger Simulator has both theory and practical training. It can be used to simulate operation of a shovel, digger, excavator or dumper and has been designed with safety and productivity in mind. The user can operate the machine from a safe stand-off distance or from inside a fully enclosed and environmentally controlled trainingscene. The industrial simulator is pre-programmed by qualified engineers before dispatch. The full-scale simulators are ready for the student to use and provides real-time monitoring via the Tenstar operator's station. The simulators have a patented integrated motion platform which enables the user to move at a realistic walk speed. All training centers feature a full range of training scenarios and simulations to develop and refine the students skills. Tenstar simulators have been designed with safety and productivity in mind.
