In addition to this, you should know that some applications may be installed on your machine that are causing conflicts and sometimes even causing you to see the CSR8510 A10 driver error on Windows. There are many ways to fix this issue. The initial step in finding and fixing the problem is by going to your Control Panel and then opening Windows Update. When this is open, make sure that it is up to date. You can also open the utility by typing Windows update in the search bar located at the bottom of your screen. After installation of these updates, you will be prompted to reboot your computer. In the event that this is unsuccessful, you will not be able to access the Windows Update utility. To keep up to date, open it again and click on the More Settings button. Click on the Windows Update in the list and make sure that all the options are activated on a daily basis. If you are unable to update or access Windows Update, you may have to repair some of the components on your computer. In Windows 8.1 or later, go to the program specific control panel, like Program and Features, by entering this into the search bar. If you see Windows Update under the Program and Features, click on it. Some users report that this is not available in Windows 10. If you are unable to open Windows Update, the first thing to do is restart the computer. If this does not solve the problem, you can try starting up your computer in Safe Mode. In most cases, this will solve the problem. Some users report that the CSR8510 A10 driver error appears while in Safe Mode, however, it will still be present when you attempt to open Windows Update.
