Adobe has released the final build of Photoshop CC 2015, version 14.1. The latest version of the web-based service and software application offers easier access to content on the web and in the cloud, along with several new features, such as touch-ups and editing for mobile devices, and versions for iPads. One of the biggest innovations is the new Content-Aid workflow that lets users start editing on a mobile device or tablet and then return to the desktop to finish it off. Lightroom 5 also brings new features that work with the latest version of Photoshop. The new Content-Ai software allows users to assign an "AI" matte to an original image, then pick out the best parts of pixels to bring into the face or body and adjust the light, reflecting that instead of the original image. Next, users can extract the face, limbs, or even a whole body, from the matte to use in their own photographs, either replacing the existing body or adding one on top of the existing reference. Adobe has released software suite called Project Sweet Suite (previously known as Photoshop Mix) that extends Photoshop CC 2015. Sweet Suite consolidates Photoshop CC 2015 features that allow users to easily combine multiple components from Adobe's Creative Cloud Photography apps – Photoshop CC and Lightroom CC into one project. With Sweet Suite, users can quickly combine original images and other web or cloud-hosted resources into one complete work as well as access features and capabilities from all three apps, with a unified user experience. Project Sweet is available for immediate download, and users can learn more and sign up for early access by visiting the website, which shows the latest features and capabilities as they are released. By signing up, users can get access to all the app releases before they become available to others.
