To be sent a trial copy, to be sent a full version, to be sent a version which includes neither the original nor the trial version. If your business requires people to work in secret, you need different software. Even back around CS2 (or maybe it was Photoshop 7), Photoshop recognized if you were scanning money, showed you a warning box, and refused to open it. Adobe knows what you're doing because Photoshop is talking to Adobe over the Internet in the background; that's how activation works. Run many days offline, and the program will stop running until you go online again for it to validate and swap data. Nice review but after upgrading to LR5.2 RC I think performance is better than with LR4. Working on a project with 1500 D800 NEFs my impression is that the smart previews increase speed while working in the Developer mode – in Lib. mode however everything slows because the JPEG previews are used. So far I am not sure how the Jpegs are used as previews when you have the smart previews (DNGs) available. But have to say that I am happy with 5.2 RC although I will say bye-bye to LR the day they make it part of CC.

Often, a white balance is cleverly left uncorrected, to facilitate the use of aggressive black and white and color filters without removing detail. 25–50% of the brightness can be left untouched, while brightening the other half of the exposure significantly, with the intention of creating a very loose grain to add texture, or, in a slightly less flexible mode, to start with a cloudy sky and then adjust the other exposure to correct for the light pollution of the city or whatever situation might be causing the darker regions. There are other options as well. Apparently, some cameras, including Nikon P series , Autofocus Ver 5.0, can do this correction on-camera natively for 20–50% reduction in light output and some cameras, Canon 7D , have exposure compensation dials to allow adjustment of the exposure while the device is set to auto.
