The most important question to ask when selecting a password manager is whether it can store your passwords securely. This is the most important factor, as any password manager that can not do this is not worth trying. It is easy to store your passwords securely, so password managers can usually store the passwords in an encrypted file. If your password manager can not store your passwords securely, it is not worth trying. The next factor to consider is how it functions. Does it have a web interface to manage your passwords? Does it store your logins in a computer folder, or sync them across various devices? Does it have a cloud feature? Do you need to register your logins? If the password manager has a web interface, this is a plus, but if it does not, it is negative. The more functionality that a password manager has, the more powerful it can be. If the password manager does not have a web interface this is a drawback, but it is not a deal breaker.

For many people, iPads have already taken over, at least partially, the functions of basic yesteryear's graphics tablets. Editing photo, video, or comics and choosing that which you want to present is the iPad's forte. It's not that you can't accomplish all of your editing on the iPad Pro—you can, and doing so has clear benefits. But if you're using an iPad Pro, you can save your image in the cloud, getting your edited work wherever you are. Now if only the surface's the only part of the iPad Pro that'll photoshop a masterpiece:

Feature	Status
5K display	It's possible on the iPad Pro (not out yet)
Cellular availability	It's coming in the Fall for AT&T customers
The iPad Pro is a powerful workhorse. Still true, just as it was before
