Our first step is to create a new User account on your computer. There are multiple ways - a couple of days ago we showed you how to boot into a Mac OS X recovery disk. Or, you can have a friend run Setup Assistant from your DVD and then choose "Assign new Users" in the first step of the process. The first step in installing Photoshop is to go to the Adobe website, navigate to the Photoshop download page, and click the link to the download link. Once the Adobe Photoshop download completes, you need to open the file and follow the on-screen instructions to install the software. Next, you need to locate the Adobe Photoshop installation.exe file and run it. Next, you need to locate the patch file and copy it to your computer. The patch file is usually available online, and it is used to unlock the full version of the software. Next, you need to open the patch file and follow the instructions on the screen. Once the patching process is complete, you should have a fully functional version of Photoshop on your computer. To make sure that the software is running properly, you should check the version number to ensure that the crack was successful. That's it - you have now successfully installed and cracked Adobe Photoshop!
